

CWB-Router™

What can it do for Ez-Cap® Customers?

CWB-Router™ is an **Add-In** to the **Claims Workbench™** which provides a means of directing files from a claim file to multiple destinations and identifying claims that need to be reviewed manually. Initial destinations can be determined by a series of Router Algorithms. Some of the destinations can require manual claim review to determine the final destination

For Ez-Cap customers with multiple databases/companies, an algorithm can determine which database/company the claim should be destined for based on Ez-Cap eligibility information. For all Ez-Cap customers, the Router can run algorithms that identify resubmits for invalid codes, manual holds for eligibility review and manual holds for updating Ez-Cap tables, e.g., provider tables.

CWB-Router™ provides the following benefits:

- Automatically Identify Claims that need **manual review**
- Add **your own destinations**
- You **control the hold/manual-intervention** destinations
- **Continue Autoprocessing** after manual decision points
- **Audit reports** identify who has manually changed destinations
- Hold claims for **invalid provider numbers**
- Print claims with **negative charges**
- Automatically direct claims to **third parties**
- **Identify data inconsistent** with Ez-Cap Data
- Send **only clean claims** to **Claims-2-Ezcap™**
